

DemoBank — Internal Transaction Monitoring Rules

Important: This is a fictional bank policy created for a hackathon demonstration. It is not an RBI, PMLA, or other regulatory requirement.

Version: 1.0 **Status:** Demonstration / Configurable **Owner:** DemoBank Fraud & Risk Team

1. Risk Detection Rules

ID	Signal	Condition	Default response
BM-001	High velocity	>5 transactions within 10 minutes	Flag for review; increase risk
BM-002	Abnormal amount	>5× customer's 30-day average	High-risk signal
BM-003	New device	Previously unseen device	Additional verification with other risk signals
BM-004	Location anomaly	Material change from recent transaction location	Generate location alert
BM-005	Multiple signals	3+ high-risk signals together	Escalate to analyst
BM-006	High-risk account	Internally classified high risk	Enhanced monitoring
BM-007	Failed authentication	>3 failed attempts before transaction	Hold for verification
BM-008	New beneficiary	High-value transfer within 30 min of beneficiary creation	Hold for verification
BM-009	Unusual time	Outside customer's normal activity window	Add anomaly signal
BM-010	Shared device	Device linked to multiple unrelated accounts	Escalate for investigation

2. Decision Thresholds

Risk score	Level	Default action
0–30	LOW	Approve unless other controls require review
31–60	MEDIUM	Monitor; review if multiple signals appear
61–80	HIGH	Analyst review / additional verification
81–100	CRITICAL	Hold pending verification

3. Analyst Review

Analysts should review transaction context, customer history, device information, location anomalies, velocity indicators, and RAG-retrieved evidence before making a final decision.

4. RAG Metadata
