

DemoBank — Historical Fraud Cases

Important: These are synthetic fictional cases created for the hackathon RAG demonstration. They are not real customer records or official fraud statistics.

CASE-001 — Account Takeover

Scenario: A new device accessed an established account. Within 8 minutes, 6 transfers were attempted and the total amount was far above normal activity.

Indicators: New device; high velocity; abnormal amount; unusual access context.

Suggested investigation: Hold transaction; verify customer; review recent authentication and device activity.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts

CASE-002 — High-Velocity Card Testing

Scenario: A card produced many small authorization attempts across several merchants, followed by a larger purchase.

Indicators: Rapid sequence; merchant diversity; sudden amount increase.

Suggested investigation: Challenge or temporarily block; review card activity and authentication.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts

CASE-003 — Impossible Travel Pattern

Scenario: A transaction appeared from one region and shortly afterward another appeared from a distant region inconsistent with the available travel time.

Indicators: Large location change; short time gap; unusual device/location combination.

Suggested investigation: Generate location alert and request additional verification.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts

CASE-004 — Shared Device Network

Scenario: The same device identifier appeared across several unrelated accounts, followed by suspicious activity.

Indicators: Device shared across accounts; correlated suspicious activity.

Suggested investigation: Investigate linked accounts and device history.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts

CASE-005 — New Beneficiary + High Value

Scenario: A new beneficiary was added shortly before a high-value transfer several times above the customer's normal amount.

Indicators: New beneficiary; abnormal amount; short interval.

Suggested investigation: Hold transfer pending authentication and beneficiary verification.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts

CASE-006 — Mule-Like Pattern

Scenario: An account with limited history suddenly received several credits followed by rapid outgoing transfers to unrelated beneficiaries.

Indicators: Sudden activity spike; rapid pass-through; unusual counterparties.

Suggested investigation: Escalate for enhanced review and examine connected transactions.

RAG tags: account_takeover, transaction_velocity, device_anomaly, location_anomaly, beneficiary_risk, linked_accounts
